PROFESSIONAL SUMMARY

Product designer who ships the code. 10+ years across UX design, design systems and front-end development on global B2B and B2C platforms. Currently Senior Product Designer and Capability Lead at bp, leading design engineering on bpCore, bp's enterprise design system. I work at the seam between design and engineering: Figma Variables to design tokens to shipped React, with Storybook as the shared reference that holds design and development in lockstep through handoff. Earlier: five years at Michelin across B2B and B2C, and front-end engineering roots at Packt and TCS.

CORE SKILLS

Design systems and design engineering: Design tokens (primitive, semantic, component), Figma Variables, Tokens Studio, Style Dictionary, Storybook, Figma MCP, design-to-development handoff, atomic design, federated system governance, accessibility (WCAG 2.1 AA)

Front-end development: HTML5, CSS3, JavaScript (ES6+), React, Tailwind CSS, Radix UI, Git, Figma Plugin API

AI in design and build: Claude and Cursor for production-grade code and rapid prototyping, AI-assisted design system scaffolding and drift auditing, MCP integrations, conversational AI design, generative AI product design, Framer AI

Design and UX: Interaction design, prototyping (high and low fidelity), service design, animation and micro-interactions, responsive and adaptive UI, user research, usability testing, A/B testing, UX strategy, design sprints

Tools and collaboration: Figma, Framer, Webflow, Sketch, Axure, Miro, Notion, Zeplin, Jira, Confluence, Agile, Scrum, stakeholder communication

PROFESSIONAL EXPERIENCE

Senior Product Designer, Capability Lead and Design Engineering

bp | India / Global | Sep 2025 to Present

- Design engineering lead on bpCore, bp's enterprise design system. Owned brand-to-system alignment for the 2025 brand refresh, including new colour ramps, neutral panes and the typeface migration from Roboto to bp Sans, shipped as token and component updates rather than a redraw.
- Ran a portfolio-wide adoption audit paired with a structured adoption survey, and used that evidence to define the bpCore MVP scope. The audit surfaced the core finding: design adoption consistently outruns development adoption, with above 90% token coverage but only 2% consuming coded components.
- Diagnosed the cause: bpCore was distributed as a Figma system with a handoff, so designers could adopt it and developers had nothing to install. Drove the fix, establishing Storybook as the coded layer's front door and the shared surface for design-to-development handoff, plus Figma MCP integration so components are consumable directly by developers and by coding agents.
- Designed a federated, tiered architecture (brand tokens, central core components, domain kits, product teams) after B2C mobile products diverged from core on component structure and branding, establishing bpCore as the central brand and token authority while domains own their own component reality.
- Working with bp's UX agentic team on agents deployed to track design system adoption across token coverage, component usage and drift, replacing manual audits at portfolio scale.
- Designed bp's Palantir-powered analytics platform for Digital and Technology performance reporting to VPs. Led comprehensive VP research and service design to understand executive information needs, and delivered 20 of 21 stakeholder requirements, reducing manual reporting burden across the leadership cycle.
- As Capability Lead, built and still run a development programme for 50+ designers across India and global hubs: a legible growth and promotion path, and the shared language non-design managers use to assess design contribution at appraisal. Pioneered bp's design community programmes, turning individually-placed designers into a peer-to-peer learning network; mentor across levels and lead design talent acquisition.

Assistant Manager, User Interface and Front-End Development

Michelin India Pvt Ltd | Pune, India | Oct 2020 to Aug 2025

- Designed and built the MICHELIN Fuel Savings Calculator end to end as sole designer and front-end developer on the production React build, working with the back-end team who served the savings logic and R&D-validated data through the CMS. Michelin's market-facing fuel-savings tool (b2b.michelin.in/fuel-saving-calculator).
- Built and maintained a reusable design system and component library that the engineering teams built from, so shared components stopped being redrawn per project.
- Conversational designer on a generative AI chatbot for direct tyre-change service booking, reducing friction in the customer journey.
- Redesigned complex data visualisations in Salesforce-based CRM dashboards, working with UX researchers on information architecture and synthesising qualitative and quantitative insight to make high-density information usable for non-technical users.
- Ran research-informed design iteration on B2C landing pages for Michelin lifestyle products through user testing, UX audits and structured A/B experimentation.
- Championed the consolidation of Michelin's websites under one umbrella with the head of design (pro.michelin.com).
- Michelin Champions Award, 2022 and 2023, for the fuel savings calculator and the wiper blades platform. Go-Getter Award, B2B website.

Software Developer, UI/UX Design and Front-End Development

Packt Publishing Pvt Ltd | Mumbai, India | Nov 2017 to May 2020

- Designed and built the front end of the Packt website in HTML, CSS, JavaScript and React, owning work from wireframe through to peer-reviewed, deployed code and removing the handoff step between design and engineering entirely.
- Pioneered Packt's first design style guide covering colour, type scale, button sizes, iconography and a responsive grid, adopted by the front-end team as the shared reference.
- Delivered high- and low-fidelity prototypes grounded in user research and business requirements; ran A/B testing and usability analysis, folding workshop feedback into user flows and interaction patterns.
- Worked with stakeholders on information architecture and end-to-end journeys for content-rich web properties.

Assistant Systems Engineer

Tata Consultancy Services | Mumbai, India | Sep 2015 to Nov 2017

- Translated client feedback into UX and functional improvements for business-critical enterprise applications.
- Created process documentation and application flowcharts to support design clarity across complex systems.
- Delivered internal product demos and usability walkthroughs.

EDUCATION

Bachelor of Engineering, Electronics and Telecommunications

M.H. Saboo Siddik College of Engineering, Mumbai, India | 2011 to 2015

CERTIFICATIONS

- Webflow Certified Developer
- Product Design in AI (Udemy)
- Object-Oriented UX Fundamentals (Udemy)
- Figma UI/UX Design Essentials (Udemy)
