

ZARIN SOLANKI

Senior Product Designer | Design Engineer | Design Systems

+91 7666757809 · zarin.solanki.work@gmail.com · linkedin.com/in/zarin-solanki · zarin071.github.io/zarin-portfolio

Product designer who ships the code. 10+ years across UX design, design systems and front-end development on global B2B and B2C platforms. Currently Senior Product Designer and Capability Lead at bp, leading the design engineering side of bpCore — bp's enterprise design system — and running the design capability programme for 50+ designers across India and global hubs. I work at the seam between design and engineering: Figma variables to design tokens to shipped React, with Storybook as the shared reference that holds design and development in lockstep through handoff. Earlier: five years at Michelin across B2B and B2C, and front-end engineering roots at Packt and TCS.

CORE SKILLS

Design systems & design engineering: Design tokens (primitive → semantic → component), Figma Variables, Tokens Studio, Style Dictionary, Storybook, Figma MCP, design-to-development handoff, atomic design, federated system governance, accessibility (WCAG 2.1 AA)

Front-end development: HTML5, CSS3, JavaScript (ES6+), React, Tailwind, Radix, Git, Figma Plugin API

AI in design & build: Claude and Cursor for production-grade code and rapid prototyping, AI-assisted design system scaffolding and drift auditing, MCP integrations, conversational AI design, generative AI product design, Framer AI

Design & UX: Interaction design, prototyping (high and low fidelity), animation and micro-interactions, responsive and adaptive UI, user research, usability testing, A/B testing, UX strategy, design sprints

Tools & collaboration: Figma, Framer, Webflow, Sketch, Axure, Miro, Notion, Zeplin, Jira, Confluence, Agile/Scrum, stakeholder communication

EXPERIENCE

Senior Product Designer — Capability Lead & Design Engineering

- bp | India / Global | Sep 2025 – Present
- Design engineering lead on **bpCore**, bp's enterprise design system. Owned brand-to-system alignment for the 2025 brand refresh — new colour ramps and neutral panes, and the typeface migration from Roboto to bp Sans — shipped as token and component updates rather than a redraw.
 - Ran a portfolio-wide adoption audit across **221 projects consuming bpCore**, paired with a structured adoption survey, and used that evidence to define the bpCore MVP scope. The audit surfaced the core finding: design adoption consistently outruns development adoption (90 projects above 90% token coverage; only 2 consuming coded components).
 - Diagnosed the cause of that gap — bpCore was distributed as a Figma system with a handoff, so designers could adopt it and developers had nothing to install. Drove the fix: **Storybook as the coded layer's front door** and the shared surface for design-to-development handoff — a living reference where designers and developers review states, variants and usage together — plus Figma MCP integration so components are consumable directly by developers and by coding agents.
 - Designed a **federated, tiered architecture** (brand tokens → central core components → domain kits → product teams) after B2C mobile products diverged from core on both component structure and branding — establishing bpCore as the central brand and token authority while domains own their own component reality.
 - Working with bp's UX agentic team on **agents deployed to track design system adoption** — token coverage, component usage and drift — replacing manual audits at portfolio scale.
 - As **Capability Lead**, built a development programme for **50+ designers** across India and global hubs, still running and still evolving: a legible growth and promotion path for designers, and the shared language non-design managers use to assess design contribution, growth and learning at appraisal.
 - Pioneered bp's design community programmes, turning individually-placed designers into a peer-to-peer learning network. Mentor designers across levels and lead design talent acquisition.
 - Designed and built bp's internal SharePoint Product & Projects Hub — a central platform for product management, project management, business analysis and service design practitioners covering community engagement, discipline-lead access, onboarding and skills development.

Assistant Manager — User Interface & Front-End Development

- Michelin India Pvt Ltd | Pune, India | Oct 2020 – Aug 2025
- Designed and built the **MICHELIN Fuel Savings Calculator** end to end: sole designer and front-end developer on the production React build, working with the back-end team who served the savings logic and R&D-validated data through the CMS. Michelin India's first market-facing fuel-savings tool; the same value-first model later appeared in Michelin's global Connected Fleet Carbon Calculator. (b2b.michelin.in/fuel-saving-calculator)
 - Built and maintained a reusable design system and component library that the engineering teams built from, so shared components stopped being redrawn per project.
 - Conversational designer on a generative AI chatbot for direct tyre-change service booking, reducing friction in the customer journey.
 - Redesigned complex data visualisations in Salesforce-based CRM dashboards, working with UX researchers on information architecture and synthesising qualitative and quantitative insight to make high-density information usable for non-technical users.
 - Ran research-informed design iteration on B2C landing pages for Michelin lifestyle products — user testing, UX audits and structured A/B experimentation.
 - Championed the consolidation of Michelin's websites under one umbrella with the head of design (pro.michelin.com).
 - Michelin Champions Award, 2022 and 2023** — for the fuel savings calculator and the wiper blades platform. Go-Getter Award, B2B website.

Software Developer — UI/UX Design & Front-End Development

- Packt Publishing Pvt Ltd | Mumbai, India | Nov 2017 – May 2020
- Designed and built the front end of the Packt website in HTML, CSS, JavaScript and React — owning work from wireframe through to peer-reviewed, deployed code, and removing the handoff step between design and engineering entirely.
 - Pioneered Packt's first design style guide: colour, type scale, button sizes, iconography and a responsive grid, adopted by the front-end team as the shared reference.
 - Delivered high- and low-fidelity prototypes grounded in user research and business requirements; ran A/B testing and usability analysis, folding workshop feedback into user flows and interaction patterns.
 - Worked with stakeholders on information architecture and end-to-end journeys for content-rich web properties.

Assistant Systems Engineer

- Tata Consultancy Services | Mumbai, India | Sep 2015 – Nov 2017
- Translated client feedback into UX and functional improvements for business-critical enterprise applications.
 - Created process documentation and application flowcharts to support design clarity across complex systems.
 - Delivered internal product demos and usability walkthroughs.

EDUCATION

Bachelor of Engineering — Electronics & Telecommunications | 2011 – 2015

M.H. Saboo Siddik College of Engineering, Mumbai, India

CERTIFICATIONS

Webflow Certified Developer · Product Design in AI (Udemy) · Object-Oriented UX Fundamentals (Udemy) · Figma UI/UX Design Essentials (Udemy)
